

INTRODUCING NIGHTFORCE ZEROSTOP. AN INSTANT RETURN TO ZERO EVERY TIME UNDER ANY CONDITIONS.

It's an old problem. Make a radical adjustment to your scope's elevation settings, perhaps even through two turns of the knob, and returning to your zero setting can be almost impossible...especially under stressful situations or in bad lighting.

Other manufacturers have tried various means to solve this problem, with less-than-satisfactory results.

Now, Nightforce has a new solution to this old problem. A solution so good, so simple and so effective, it is patented.

With our ZeroStop turrets, after sighting in your rifle, you set the ZeroStop mechanism to any one of the 400 elevation clicks (1/4 MOA or 1/10 Mil) on a Nightforce scope. Then make all the elevation adjustments you wish...you can return the turret to absolute zero quickly and positively just by feel. There is no need for visual reference, charts, or counting clicks. You can always find your zero point, even in total darkness.

ZeroStop. Only from Nightforce. Back to zero, any time and every time.

The Nightforce ZeroStop relies on a precisely machined internal stop that will not shift or loosen. Our ZeroStop technology was designed at the request of Tier One U.S. military forces, and has been proven in the field under the most rigorous conditions. Now we are able to offer the same tested design to the public.

ZeroStop technology is available on all Nightforce 1-4x24, 2.5-10x24, 3.5-15x50, 3.5-15x56, 5.5-22x50 and 5.5-22x56 NXS scopes. Existing Nightforce riflescopes in these configurations can also be retrofitted to accommodate the ZeroStop turret.
